

LA PARMENTIERE

EMPTYING PIPE FOR BEEF LARGE INTESTINE

PERFORMANCE

The large intestine is engaged on its largest side, on the double skin pipe. Then you need to make it slide completely on the pipe above the retractors.

By pressing the pedal, you send water inside the large intestine and the manure goes out.

This emptying pipe for large intestine is made entirely in 18/10 stainless steel.

HOURLY YIELD

One worker can empty a maximum of 80 beef large intestines per hour.

IMPORTANT

Beef Large intestines have to be pulled on very carefully with a knife before engaged them on the pipe, to avoid doing holes on it. From holes the manure goes out and soils the outside fat of the intestines.

STARTING

- Connect the water inlet with a flexible pipe.
 - Pressure used : 4 to 6 Kgs.
 - Adjust the screw to have a water flow of 10cm.
 - This water flow is only to return the large intestine.
- You need to previous a table with a height at 1m to feed the emptying pipe.
- When the large intestines are empty you need to load them on the LA PARMENTIERE large intestine cleaner type 56GB.
